

## FEATURES

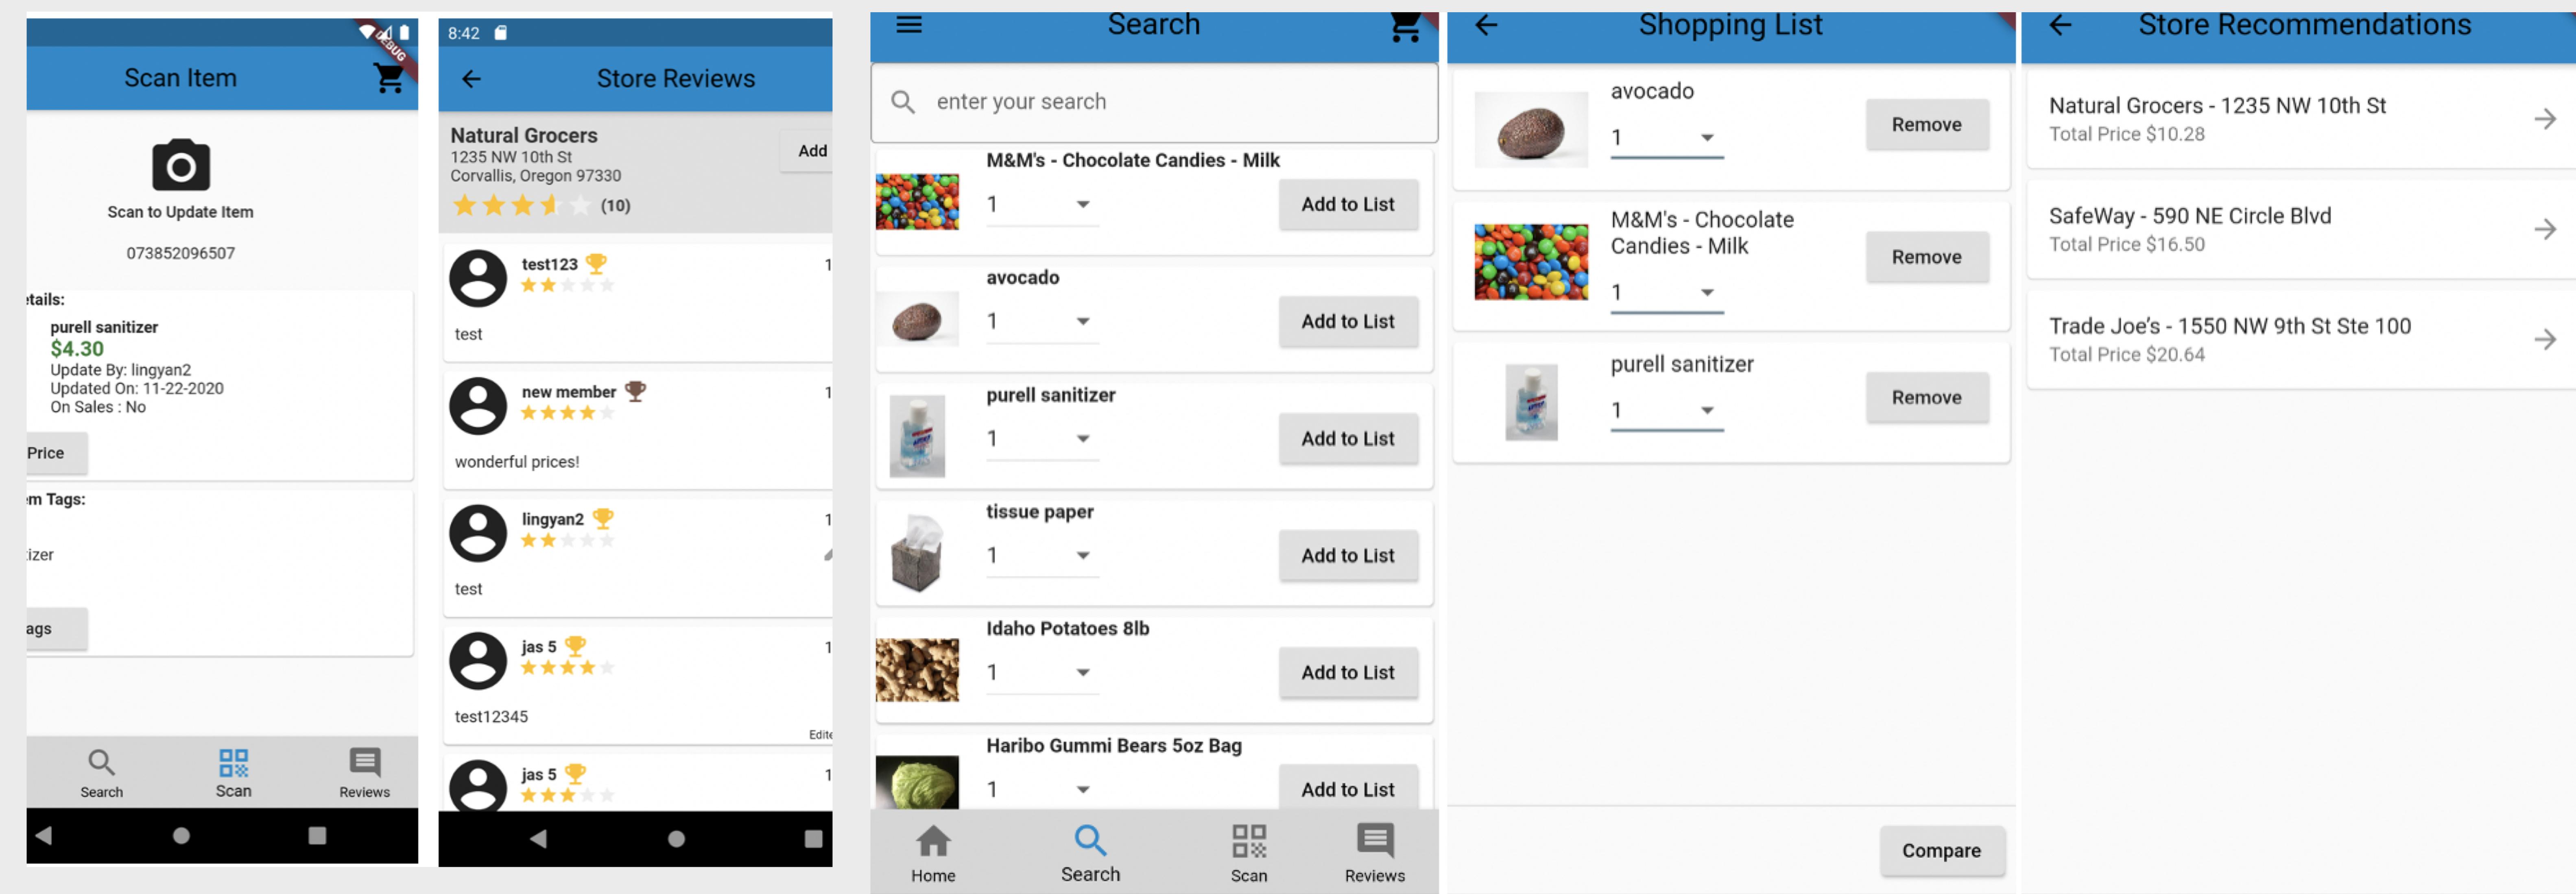

- An App developed with Dart/Flutter
- Firebase Cloud Fire Store database with real-time data updates
- Developed with Android, already been tested on Emulator
- Designed to be beneficial for budget conscious shoppers who are on the hunt for the best deals and positive shopping experiences in their neighborhood
- Aimed at creating a community for users to efficiently exchange information about deals and shopping experiences

# CROWD-SOURCED SHOPPING APP

A mobile shopping App that users can compare prices within nearby stores, update items prices, add item tags and comment on shopping experiences.

Developed By: Rene Arana, Lingyan Ma & Jasmine Mittal

## SCAN & REVIEW

- Users are encouraged to scan a product in their store to update its price, show whether it's on sale or not, and add tags to the item
- Users are encouraged to add a review to their chosen store and rate their shopping experience
- Users can gain points from above actions and level up from Novice to Master

## SEARCH & COMPARE

- Users can search for items, and click the Add to List button to add them to their shopping list, each item quantity limit to 10
- Users can create, remove, update and delete their shopping list
- Users choose their location as they prefer, and click the Compare button to compare nearby stores' prices for the shopping list
- The lowest price store will be place on top of the compare results, and detailed item prices are listed in each stores' detail page
